

CONTROLLED ENTERPRISE DOCUMENT

MH Quality Management Plan

MH Construction, INC Enterprise Management System

Document family: CORE DOCTRINE

Document title: MH Quality Management Plan

Version: 1.0 | Lifecycle: Rough Draft

Use only after required functional, technical, field-usability, and approval gates are complete.

Control: Version 1.0 | Status Rough Draft | Author and Chief Editor: Matt Ramsey | Co-Editor: Todd Shoeff | Final Approver: Jeremy Thamert

MH Construction, INC Quality Management Program

Controlled functional standard and operating evidence

Document ID: QMP-001 Version: 1.0 Owner: Quality Lead / COO Approver: Jeremy Thamert, Owner/CEO Status: Rough Draft - functional, technical and field review required Classification: Internal - controlled System of record: Project quality repository Review cycle: Annual and upon material change

This standard follows the original MH Ecosystem document-family architecture. It operates with the Enterprise Management System, the approved project requirements, applicable law, engineered design, manufacturer instructions and executed contracts. When requirements conflict, stop the affected work or decision and escalate it.

1. Purpose and authority

This manual establishes the accountable process, required evidence and release conditions for quality management program. It does not authorize a departure from a contract, law, technical instruction or safety requirement. The owner assigns trained delegates but retains accountability for process performance and evidence quality.

2. Required controls

No.	Required control
1	Project quality plan and inspection/test plan
2	First-work inspection, hold points and mockups
3	Nonconformance, corrective action and turnover verification

3. Operating workflow

1. Approve QMP-PLAN-ITP-001 before mobilization.
2. Stop at a hold point until the listed acceptance evidence is complete.
3. Issue QMP-NCR-001 for nonconforming work and verify reinspection before closure.

4. Evidence and records

The following records prove execution. Each record must identify project, employee, asset, vendor or transaction reference; preparer; date/time; reviewer; disposition; system-of-record location; and closure evidence where applicable.

- QMP-PLAN-ITP-001
- QMP-NCR-001
- Closeout turnover index

5. Exceptions, escalation and assurance

An exception requires written scope, reason, risk, compensating control, owner, approval authority, expiration and evidence location. Material failures, overdue actions, repeat events, suspected fraud, safety risks, quality failures, cyber events or contract exposures escalate immediately to the accountable owner and executive leadership. The owner reviews operating evidence at the required management cadence and initiates a controlled revision when the process, source requirements or organization changes.
