

CONTROLLED ENTERPRISE DOCUMENT

MH Workforce Development Matrix

MH Construction, INC Enterprise Management System

Document family: CORE DOCTRINE

Document title: MH Workforce Development Matrix

Version: 1.0 | Lifecycle: Rough Draft

Use only after required functional, technical, field-usability, and approval gates are complete.

Control: Version 1.0 | Status Rough Draft | Author and Chief Editor: Matt Ramsey | Co-Editor: Todd Shoeff | Final Approver: Jeremy Thamert

MH Construction, INC Workforce Training and Competency Matrix

Controlled functional standard and operating evidence

Document ID: TRN-001 Version: 1.0 Owner: HR Lead / Safety Director Approver: Jeremy Thamert, Owner/CEO Status: Rough Draft - functional, technical and field review required Classification: Internal - controlled System of record: HR and training repository Review cycle: Annual and upon material change

This standard follows the original MH Ecosystem document-family architecture. It operates with the Enterprise Management System, the approved project requirements, applicable law, engineered design, manufacturer instructions and executed contracts. When requirements conflict, stop the affected work or decision and escalate it.

1. Purpose and authority

This manual establishes the accountable process, required evidence and release conditions for workforce training and competency matrix. It does not authorize a departure from a contract, law, technical instruction or safety requirement. The owner assigns trained delegates but retains accountability for process performance and evidence quality.

2. Required controls

No.	Required control
1	Role competency, course and credential requirements
2	Credential expiration, verification and assignment restrictions
3	Performance development and recurring training

3. Operating workflow

1. Assign mandatory training by role and jurisdiction.
2. Verify required cards and qualifications before assignment to controlled work.
3. Track expiration, refresher date and supporting credential evidence.

4. Evidence and records

The following records prove execution. Each record must identify project, employee, asset, vendor or transaction reference; preparer; date/time; reviewer; disposition; system-of-record location; and closure evidence where applicable.

- Training matrix
- Operator certification log
- Toolbox talk attendance record

5. Exceptions, escalation and assurance

An exception requires written scope, reason, risk, compensating control, owner, approval authority, expiration and evidence location. Material failures, overdue actions, repeat events, suspected fraud, safety risks, quality failures, cyber events or contract exposures escalate immediately to the accountable owner and executive leadership. The owner reviews operating evidence at the required management cadence and initiates a controlled revision when the process, source requirements or organization changes.
