

CONTROLLED ENTERPRISE DOCUMENT

# MH Project Execution Playbook

MH Construction, INC Enterprise Management System

Document family: PROJECT DELIVERY

Document title: MH Project Execution Playbook

Version: 1.0 | Lifecycle: Rough Draft

Use only after required functional, technical, field-usability, and approval gates are complete.

---

Control: Version 1.0 | Status Rough Draft | Author and Chief Editor: Matt Ramsey | Co-Editor: Todd Shoeff | Final Approver: Jeremy Thamert

# MH Construction, INC Project Execution Playbook

---

## Controlled functional standard and operating evidence

**Document ID: PEP-001 Version: 1.0 Owner: COO / PM Wing Lead Approver: Jeremy Thamert, Owner/CEO Status: Rough Draft - functional, technical and field review required Classification: Internal - controlled System of record: Project system of record Review cycle: Annual and upon material change**

This standard follows the original MH Ecosystem document-family architecture. It operates with the Enterprise Management System, the approved project requirements, applicable law, engineered design, manufacturer instructions and executed contracts. When requirements conflict, stop the affected work or decision and escalate it.

## 1. Purpose and authority

This manual establishes the accountable process, required evidence and release conditions for project execution playbook. It does not authorize a departure from a contract, law, technical instruction or safety requirement. The owner assigns trained delegates but retains accountability for process performance and evidence quality.

## 2. Required controls

| No. | Required control                                                  |
|-----|-------------------------------------------------------------------|
| 1   | Eight lifecycle gates from pursuit through final closeout         |
| 2   | Schedule, procurement, RFI, submittal, change and meeting control |
| 3   | Safety, quality and closeout integration                          |

### 3. Operating workflow

1. Complete the applicable gate evidence or obtain a documented exception.
2. Maintain the approved baseline, three-week lookahead and current project logs.
3. Retain closeout, warranty and client-acceptance evidence before final closure.

#### 4. Evidence and records

The following records prove execution. Each record must identify project, employee, asset, vendor or transaction reference; preparer; date/time; reviewer; disposition; system-of-record location; and closure evidence where applicable.

- OPS-GATE-HANDOFF-058
- Project gate checklist
- Closeout acceptance certificate

## 5. Exceptions, escalation and assurance

An exception requires written scope, reason, risk, compensating control, owner, approval authority, expiration and evidence location. Material failures, overdue actions, repeat events, suspected fraud, safety risks, quality failures, cyber events or contract exposures escalate immediately to the accountable owner and executive leadership. The owner reviews operating evidence at the required management cadence and initiates a controlled revision when the process, source requirements or organization changes.
