MH Construction, INC Subcontractor Management Manual

Controlled functional standard and operating evidence

Document ID: SUB-001 **Version:** 1.0 **Owner:** Procurement / Project Controls **Lead Approver:** Jeremy Thamert, Owner/CEO **Status:** Rough Draft - functional, technical and field review required
Classification: Internal - controlled **System of record:** Approved vendor and project repository
Review cycle: Annual and upon material change

This standard follows the original MH Ecosystem document-family architecture. It operates with the Enterprise Management System, the approved project requirements, applicable law, engineered design, manufacturer instructions and executed contracts. When requirements conflict, stop the affected work or decision and escalate it.

1. Purpose and authority

This manual establishes the accountable process, required evidence and release conditions for subcontractor management manual. It does not authorize a departure from a contract, law, technical instruction or safety requirement. The owner assigns trained delegates but retains accountability for process performance and evidence quality.

2. Required controls

No.	Required control
1	Prequalification, insurance, licensing and safety review
2	Scope, buyout, execution and field-performance control
3	Payment, waiver, evaluation and dispute administration

3. Operating workflow

1. Approve the vendor record before award or mobilization.
2. Issue a defined scope and validate compliance before payment.
3. Evaluate safety, quality, schedule and administrative performance at closeout.

4. Evidence and records

The following records prove execution. Each record must identify project, employee, asset, vendor or transaction reference; preparer; date/time; reviewer; disposition; system-of-record location; and closure evidence where applicable.

- Vendor prequalification record
- Subcontractor performance evaluation
- Counsel-approved waiver instrument

5. Exceptions, escalation and assurance

An exception requires written scope, reason, risk, compensating control, owner, approval authority, expiration and evidence location. Material failures, overdue actions, repeat events, suspected fraud, safety risks, quality failures, cyber events or contract exposures escalate immediately to the accountable owner and executive leadership. The owner reviews operating evidence at the required management cadence and initiates a controlled revision when the process, source requirements or organization changes.
