

CONTROLLED ENTERPRISE DOCUMENT

MH Emergency Response Plan

MH Construction, INC Enterprise Management System

Document family: SAFETY AND FIELD OPERATIONS

Document title: MH Emergency Response Plan

Version: 1.0 | Lifecycle: Rough Draft

Use only after required functional, technical, field-usability, and approval gates are complete.

Control: Version 1.0 | Status Rough Draft | Author and Chief Editor: Matt Ramsey | Co-Editor: Todd Shoeff | Final Approver: Jeremy Thamert

MH Construction, INC Emergency Response and Business Continuity Standard

Controlled functional standard and operating evidence

Document ID: ERP-001 Version: 1.0 Owner: COO / IT / Safety Approver: Jeremy Thamert, Owner/CEO Status: Rough Draft - functional, technical and field review required Classification: Internal - controlled System of record: Controlled emergency repository Review cycle: Annual and upon material change

This standard follows the original MH Ecosystem document-family architecture. It operates with the Enterprise Management System, the approved project requirements, applicable law, engineered design, manufacturer instructions and executed contracts. When requirements conflict, stop the affected work or decision and escalate it.

1. Purpose and authority

This manual establishes the accountable process, required evidence and release conditions for emergency response and business continuity standard. It does not authorize a departure from a contract, law, technical instruction or safety requirement. The owner assigns trained delegates but retains accountability for process performance and evidence quality.

2. Required controls

No.	Required control
1	Project emergency action planning and incident command
2	Notifications, drills and post-event improvement
3	Business continuity, communication and recovery priorities

3. Operating workflow

1. Select jurisdiction and site-specific emergency contacts before work begins.
2. Run documented drills and correct identified failures.
3. Preserve incident evidence and activate continuity procedures when company operations are threatened.

4. Evidence and records

The following records prove execution. Each record must identify project, employee, asset, vendor or transaction reference; preparer; date/time; reviewer; disposition; system-of-record location; and closure evidence where applicable.

- Emergency drill record
- Incident report
- Continuity recovery log

5. Exceptions, escalation and assurance

An exception requires written scope, reason, risk, compensating control, owner, approval authority, expiration and evidence location. Material failures, overdue actions, repeat events, suspected fraud, safety risks, quality failures, cyber events or contract exposures escalate immediately to the accountable owner and executive leadership. The owner reviews operating evidence at the required management cadence and initiates a controlled revision when the process, source requirements or organization changes.
