

CONTROLLED ENTERPRISE DOCUMENT

MH Equipment Fleet Management Manual

MH Construction, INC Enterprise Management System

Document family: SAFETY AND FIELD OPERATIONS

Document title: MH Equipment Fleet Management Manual

Version: 1.0 | Lifecycle: Rough Draft

Use only after required functional, technical, field-usability, and approval gates are complete.

Control: Version 1.0 | Status Rough Draft | Author and Chief Editor: Matt Ramsey | Co-Editor: Todd Shoeff | Final Approver: Jeremy Thamert

MH Construction, INC Equipment and Fleet Management Manual

Controlled functional standard and operating evidence

Document ID: EFM-001 Version: 1.0 Owner: Fleet Commander Approver: Jeremy Thamert, Owner/CEO Status: Rough Draft - functional, technical and field review required Classification: Internal - controlled System of record: Fleet maintenance repository Review cycle: Annual and upon material change

This standard follows the original MH Ecosystem document-family architecture. It operates with the Enterprise Management System, the approved project requirements, applicable law, engineered design, manufacturer instructions and executed contracts. When requirements conflict, stop the affected work or decision and escalate it.

1. Purpose and authority

This manual establishes the accountable process, required evidence and release conditions for equipment and fleet management manual. It does not authorize a departure from a contract, law, technical instruction or safety requirement. The owner assigns trained delegates but retains accountability for process performance and evidence quality.

2. Required controls

No.	Required control
1	Equipment authorization, inspection and defect removal
2	Preventive maintenance, repair and fleet availability
3	Vehicle, trailer and equipment assignment control

3. Operating workflow

1. Verify operator qualification before dispatch.
2. Remove unsafe equipment from service and document repair authorization.
3. Track inspections, maintenance, defects, return-to-service and asset location.

4. Evidence and records

The following records prove execution. Each record must identify project, employee, asset, vendor or transaction reference; preparer; date/time; reviewer; disposition; system-of-record location; and closure evidence where applicable.

- Operator certification log
- Daily equipment inspection
- Equipment maintenance request

5. Exceptions, escalation and assurance

An exception requires written scope, reason, risk, compensating control, owner, approval authority, expiration and evidence location. Material failures, overdue actions, repeat events, suspected fraud, safety risks, quality failures, cyber events or contract exposures escalate immediately to the accountable owner and executive leadership. The owner reviews operating evidence at the required management cadence and initiates a controlled revision when the process, source requirements or organization changes.

CONTROL INTEGRATION | VERSION 1.0 ROUGH DRAFT

Fleet governance and lifecycle control

Effective August 2026. This integration controls where it conflicts with earlier fleet, equipment, warehouse, or maintenance language in this document.

EQ-08.0 Command authority

CEO > COO > Chief Superintendent > Fleet Commander > Mechanics and Operators. If a position is vacant or unavailable, authority moves to the next available position above it in this chain.

The Fleet Commander owns asset identification, assignments, inspections, maintenance planning, vendor coordination, out-of-service controls, return-to-service acceptance, registrations, insurance evidence, and fleet record completeness.

EQ-09.0 Systems and records

The Field Command Center is the live operational system of record. Sage 100 controls acquisition cost, capitalization, depreciation, liens, insurance, fuel, maintenance cost, job cost, and disposition value. The in-house server retains approved records and locked hard copies are maintained when required. Procore receives project assignment and job-execution records without replacing either system of record.

- Use permanent MHC asset IDs and QR codes.
- Use employee IDs in operational assignment records; governed manuals identify positions, not individual employees.
- Maintain separate active, rental, small-tool, attachment, and disposed-asset registers linked through the same asset architecture.

EQ-10.0 Preventive maintenance

Service is due at the earliest applicable manufacturer, mileage, engine-hour, calendar, inspection-defect, or operating-condition trigger. Operators report readings and defects; the Fleet Commander schedules, verifies, and closes the work order.

- Torque Mobile performs planned fluid service and tire rotations at the shop for Superintendent and Foreman trucks during the every-other-Thursday Superintendent meeting.
- Valvoline and other approved providers may perform outsourced mechanical service under a Fleet Commander work order.
- No asset returns to service until the Fleet Commander or qualified designee records acceptance, restrictions, next-service trigger, and supporting invoice or service report.

EQ-11.0 Financial and lifecycle control

Every owned, leased, rented, or disposed asset must reconcile to Sage 100 and the Field Command Center. Sold or scrapped assets remain in a disposition register and are never deleted from history.

- Record acquisition, title, lien, insurance, warranty, fuel, repair, depreciation, utilization, transfer, and disposition data.
- Code rentals and operating costs to the benefiting project or overhead cost code.

CLOSED LOGIC DECISIONS | 2026-08-04

Fleet Commander is the sole formal title. The COO acts as Fleet Commander until filled. Fleet Commander controls vehicles, trailers, maintenance, registrations, insurance, asset records, and fleet availability. Chief Superintendent controls operators, assignments, deployment, and the final operational check following safety-critical repair.

Anyone may place unsafe equipment out of service through the controlled process. The dashboard must immediately notify affected roles, create repair procedures, and forecast downtime. Fleet Commander verifies repair and administrative closeout first; Chief Superintendent verifies operational return second.

Spending limits per event: Mechanic \$500; Fleet Commander \$2,500; COO \$10,000; CEO above \$10,000.

Emergency temporary limits: Mechanic \$1,000 and Fleet Commander \$5,000, with next-level notice within 24 hours.

One vehicle is controlled by one work order; related work may not be split to avoid approval.

Valvoline is limited to basic repairs and fluid flushes and does not perform tire rotations. Torque Mobile performs approved fluid service and tire rotations during planned shop events. Every outsourced service requires a work order, provider evidence, meter reading, invoice, next-service trigger, and release record.
