

CONTROLLED ENTERPRISE DOCUMENT

MH Equipment Operators Manual

MH Construction, INC Enterprise Management System

Document family: SAFETY AND FIELD OPERATIONS

Document title: MH Equipment Operators Manual

Version: 1.0 | Lifecycle: Rough Draft

Use only after required functional, technical, field-usability, and approval gates are complete.

Control: Version 1.0 | Status Rough Draft | Author and Chief Editor: Matt Ramsey | Co-Editor: Todd Shoeff | Final Approver: Jeremy Thamert

MH Construction, INC Equipment and Fleet Management Manual

Controlled functional standard and operating evidence

Document ID: EOM-001 Version: 1.0 Owner: Fleet Commander Approver: Jeremy Thamert, Owner/CEO Status: Rough Draft - functional, technical and field review required Classification: Internal - controlled System of record: Fleet maintenance repository Review cycle: Annual and upon material change

This standard follows the original MH Ecosystem document-family architecture. It operates with the Enterprise Management System, the approved project requirements, applicable law, engineered design, manufacturer instructions and executed contracts. When requirements conflict, stop the affected work or decision and escalate it.

1. Purpose and authority

This manual establishes the accountable process, required evidence and release conditions for equipment and fleet management manual. It does not authorize a departure from a contract, law, technical instruction or safety requirement. The owner assigns trained delegates but retains accountability for process performance and evidence quality.

2. Required controls

No.	Required control
1	Equipment authorization, inspection and defect removal
2	Preventive maintenance, repair and fleet availability
3	Vehicle, trailer and equipment assignment control

3. Operating workflow

1. Verify operator qualification before dispatch.
2. Remove unsafe equipment from service and document repair authorization.
3. Track inspections, maintenance, defects, return-to-service and asset location.

4. Evidence and records

The following records prove execution. Each record must identify project, employee, asset, vendor or transaction reference; preparer; date/time; reviewer; disposition; system-of-record location; and closure evidence where applicable.

- Operator certification log
- Daily equipment inspection
- Equipment maintenance request

5. Exceptions, escalation and assurance

An exception requires written scope, reason, risk, compensating control, owner, approval authority, expiration and evidence location. Material failures, overdue actions, repeat events, suspected fraud, safety risks, quality failures, cyber events or contract exposures escalate immediately to the accountable owner and executive leadership. The owner reviews operating evidence at the required management cadence and initiates a controlled revision when the process, source requirements or organization changes.

CONTROL INTEGRATION | VERSION 1.0 ROUGH DRAFT

Operator and mechanic execution controls

Effective August 2026. This integration controls where it conflicts with earlier fleet, equipment, warehouse, or maintenance language in this document.

EOM-09.0 Fleet Commander interface

CEO > COO > Chief Superintendent > Fleet Commander > Mechanics and Operators. If a position is vacant or unavailable, authority moves to the next available position above it in this chain.

Operators remain accountable to the onsite Foreman for daily production and to the Fleet Commander for equipment condition, readings, custody, and maintenance reporting.

EOM-10.0 Inspection and defect decision

Before use, the operator scans the asset QR code or enters the permanent asset ID, records employee ID, project/location, date, time, mileage or hours, and inspection results in the Field Command Center.

- Safety-critical defect: stop, isolate, tag out, notify the Foreman and Fleet Commander immediately.
- Non-safety defect: record it before operation and follow the Fleet Commander's written restriction or service direction.
- The operator may not clear a maintenance hold or return an asset to service.

EOM-11.0 Outsourced service

Mechanics may be internal or approved external providers. The Fleet Commander issues the work order, provides asset and defect information, collects the provider report and invoice, verifies completed scope, and establishes the next-service trigger.

- Torque Mobile shop service is planned around every-other-Thursday Superintendent meetings.
- Valvoline service must be tied to the applicable asset and work order.
