MH Warehouse Management Guide

MH Construction, INC Enterprise Management System

Document family: SAFETY AND FIELD OPERATIONS

Document title: MH Warehouse Management Guide

Version: 1.0 | Lifecycle: Rough Draft

Use only after required functional, technical, field-usability, and approval gates are complete.

Control: Version 1.0 | Status Rough Draft | Author and Chief Editor: Matt Ramsey | Co-Editor: Todd Shoeff | Final Approver: Jeremy Thamert

MH Construction, INC Warehouse Management Guide

Controlled functional standard and operating evidence

Document ID: WMG-001 Version: 1.0 Owner: Warehouse Manager Approver: Jeremy Thamert, Owner/CEO Status: Rough Draft - functional, technical and field review required Classification: Internal - controlled System of record: Warehouse and project repository Review cycle: Annual and upon material change

This standard follows the original MH Ecosystem document-family architecture. It operates with the Enterprise Management System, the approved project requirements, applicable law, engineered design, manufacturer instructions and executed contracts. When requirements conflict, stop the affected work or decision and escalate it.

1. Purpose and authority

This manual establishes the accountable process, required evidence and release conditions for warehouse management guide. It does not authorize a departure from a contract, law, technical instruction or safety requirement. The owner assigns trained delegates but retains accountability for process performance and evidence quality.

2. Required controls

No.	Required control
1	Receiving, damage, shortage and supplier discrepancy control
2	Tool and asset custody, inspection and return
3	Material dispatch, chemical storage and inventory accuracy

3. Operating workflow

1. Inspect and record receipt before inventory is accepted.
2. Issue assets against a custodian and expected return date.
3. Document dispatch, field receipt, backorders and material exceptions.

4. Evidence and records

The following records prove execution. Each record must identify project, employee, asset, vendor or transaction reference; preparer; date/time; reviewer; disposition; system-of-record location; and closure evidence where applicable.

- Receiving inspection log
- Tool checkout log
- Material delivery ticket

5. Exceptions, escalation and assurance

An exception requires written scope, reason, risk, compensating control, owner, approval authority, expiration and evidence location. Material failures, overdue actions, repeat events, suspected fraud, safety risks, quality failures, cyber events or contract exposures escalate immediately to the accountable owner and executive leadership. The owner reviews operating evidence at the required management cadence and initiates a controlled revision when the process, source requirements or organization changes.

CONTROL INTEGRATION | VERSION 1.0 ROUGH DRAFT

Shop, tool, and service-bay controls

Effective August 2026. This integration controls where it conflicts with earlier fleet, equipment, warehouse, or maintenance language in this document.

WMG-09.0 Asset architecture

The warehouse maintains separate but linked registers for fleet, heavy equipment, attachments, generators, small tools, consumables, rentals, and disposed assets. The Field Command Center is the live custody and location record.

- Apply a permanent asset ID and QR code before release.
- Record checkout to an employee ID, responsible position, project, and expected return date.
- Quarantine damaged, unverified, or overdue assets until resolved.

WMG-10.0 Shop service events

The Fleet Commander controls the shop service calendar and protects the every-other-Thursday Torque Mobile service window for Superintendent and Foreman trucks.

- Stage vehicles, keys, mileage, open defects, and service scope before provider arrival.
- Capture provider report, invoice, fluids, filters, tire actions, readings, deficiencies, and next-service date.
- Store used-fluid and waste documentation with the service record when MHC controls disposal.

WMG-11.0 Tool expansion

Incoming tool lists will be normalized into the same custody framework without mixing small tools into the titled fleet register.

- Use category-specific inspection and calibration fields.
- Track kits and attachments to both parent asset and current custodian.
- Retain loss, damage, repair, and disposition history.
