

CONTROLLED ENTERPRISE DOCUMENT

MH IT Data Governance Addendum

MH Construction, INC Enterprise Management System

Document family: IT AND INFRASTRUCTURE

Document title: MH IT Data Governance Addendum

Version: 1.0 | Lifecycle: Rough Draft

Use only after required functional, technical, field-usability, and approval gates are complete.

Control: Version 1.0 | Status Rough Draft | Author and Chief Editor: Matt Ramsey | Co-Editor: Todd Shoeff | Final Approver: Jeremy Thamert

MH Construction, INC Information Security and Resilience Standard

Controlled functional standard and operating evidence

Document ID: ITG-001 Version: 1.0 Owner: IT Lead Approver: Jeremy Thamert, Owner/CEO Status: Rough Draft - functional, technical and field review required Classification: Internal - controlled System of record: Controlled IT repository Review cycle: Annual and upon material change

This standard follows the original MH Ecosystem document-family architecture. It operates with the Enterprise Management System, the approved project requirements, applicable law, engineered design, manufacturer instructions and executed contracts. When requirements conflict, stop the affected work or decision and escalate it.

1. Purpose and authority

This manual establishes the accountable process, required evidence and release conditions for information security and resilience standard. It does not authorize a departure from a contract, law, technical instruction or safety requirement. The owner assigns trained delegates but retains accountability for process performance and evidence quality.

2. Required controls

No.	Required control
1	Identity, least privilege, MFA and privileged-access control
2	Device, data, backup, recovery and incident response
3	Access recertification, offboarding and vendor/system governance

3. Operating workflow

1. Approve access by role and business need before provisioning.
2. Perform quarterly access review and restore testing.
3. Report, preserve and contain suspected security incidents immediately.

4. Evidence and records

The following records prove execution. Each record must identify project, employee, asset, vendor or transaction reference; preparer; date/time; reviewer; disposition; system-of-record location; and closure evidence where applicable.

- IT-ACCESS-001
- IT-BCP-RESTORE-001
- Security incident register

5. Exceptions, escalation and assurance

An exception requires written scope, reason, risk, compensating control, owner, approval authority, expiration and evidence location. Material failures, overdue actions, repeat events, suspected fraud, safety risks, quality failures, cyber events or contract exposures escalate immediately to the accountable owner and executive leadership. The owner reviews operating evidence at the required management cadence and initiates a controlled revision when the process, source requirements or organization changes.
