TBT-03.03: Concrete Pump Truck Operations

CSI Division: Div 03 | Track Assignment: Track 1 Civil & Earthwork

DIRECTIVE

Pump truck outriggers must be fully extended and placed on stable ground or dunnage pads. Stay clear of the pump boom's swing radius.

GENERAL ORDER

Never stand between the pump truck and the ready-mix truck. The hose handler must maintain clear communication with the operator.

Key Hazards & Mitigation (The 'What If')

- Hose whips unexpectedly — keep a firm grip, do not straddle the hose.
- Outrigger sinks into soft dirt — stop pumping, reset on solid dunnage.
- Concrete splatter to the face — wear safety glasses and face shield.

FIELD INSTRUCTION

Foreman: Verify outrigger placement and ground stability before the first truck backs in.
