TBT-04.02: Masonry Saw Operations & Kickback

CSI Division: Div 04 | Track Assignment: Track 2 Structural & Steel

DIRECTIVE

Masonry saws are high-torque tools. Blade guards must be in place, and the material must be fully supported during the cut.

GENERAL ORDER

Never force the blade or twist the saw in the cut. Always use wet-cutting methods to control silica dust.

Key Hazards & Mitigation (The 'What If')

- Blade binds and kicks back — release the trigger immediately, ensure firm footing and grip.
- Cutting block dry to save time — stop work, connect the water supply, wear N95.
- Worker wearing loose clothing near the saw — secure all clothing and remove jewelry.

FIELD INSTRUCTION

Foreman: Verify the water supply is connected and functioning on all masonry saws before cutting begins.
