Use only after required functional, technical, field-usability, and approval gates are complete.

Control: Version 1.0 | Status Rough Draft | Author and Chief Editor: Matt Ramsey | Co-Editor: Todd Shoeff | Final Approver: Jeremy Thamert

TBT-08.02: Heavy Door & Frame Installation

CSI Division: Div 08 | Track Assignment: Track 3 MEP & Interior

DIRECTIVE

Commercial doors (solid wood, steel, lead-lined) are extremely heavy and prone to tipping before the hinges are secured.

GENERAL ORDER

Always use two people or a mechanical door lift to position heavy doors. Keep fingers clear of the hinge jamb during alignment.

Key Hazards & Mitigation (The 'What If')

- Door slips while setting the top hinge — let it drop, do not try to catch it with your foot.
- Fingers caught between the door and the frame — use shims and pry bars for alignment, not hands.
- Setting a heavy lead-lined door — mandate the use of a mechanical door jack.

FIELD INSTRUCTION

Foreman: Ensure a door jack or a second worker is assigned for all doors exceeding 75 lbs.
