TBT-14.02: Elevator Shaft Fall Protection

CSI Division: Div 14 | Track Assignment: Track 2 Structural & Steel

DIRECTIVE

Open elevator shafts are extreme fall hazards. A solid barricade must be maintained at all times unless active installation is occurring.

GENERAL ORDER

When the barricade is removed for work, 100% tie-off is mandatory. Never use the shaft as a trash chute.

Key Hazards & Mitigation (The 'What If')

- Barricade removed and left open — stop work, reinstall barricade immediately, issue a warning.
- Worker leans into shaft without tie-off — enforce 100% tie-off for any work within 6 feet of the edge.
- Debris falls down the shaft — secure all tools and materials near the edge.

FIELD INSTRUCTION

Foreman: Personally inspect the shaft barricades at the start and end of every shift.
