TBT-21.01: Sprinkler Pipe Fitting & Overhead Work

CSI Division: Div 21 | Track Assignment: Track 3 MEP & Interior

DIRECTIVE

Overhead pipe fitting requires stable platforms (scissor lifts or baker scaffolds). Ladder use must be minimized for heavy pipe installation.

GENERAL ORDER

Ensure all pipe grooving and threading machines are guarded. Two workers required for maneuvering main lines.

Key Hazards & Mitigation (The 'What If')

- Pipe groover catches loose clothing — keep clothes tight, use emergency stop.
- Working from a lift above another trade — barricade the area below the lift.
- Cutting pipe releases trapped pressure/water — bleed the system completely first.

FIELD INSTRUCTION

Foreman: Ensure the area below the overhead work is barricaded to prevent struck-by incidents.
