TBT-22.04: Cast Iron Pipe Cutting & Snapping

CSI Division: Div 22 | Track Assignment: Track 3 MEP & Interior

DIRECTIVE

Cutting cast iron pipe creates sharp shards and requires significant force. Snap cutters must be maintained and used with proper PPE.

GENERAL ORDER

Wear heavy leather gloves and a full face shield when snapping cast iron. Ensure the pipe is fully supported on both sides of the cut.

Key Hazards & Mitigation (The 'What If')

- Pipe snaps unevenly and drops — support the pipe with blocks or a stand.
- Metal shard flies into the eye — wear a face shield, not just safety glasses.
- Worker pinches fingers in the snap cutter chain — keep hands clear of the chain mechanism during the snap.

FIELD INSTRUCTION

Foreman: Inspect the snap cutter chain for dull or missing wheels before cutting operations begin.
