TBT-25.01 | Control Panel Installation And Low Voltage

MH Construction, INC Enterprise Management System

Document family: TOOLBOX TALK LIBRARY

Document title: TBT-25.01 | Control Panel Installation And Low Voltage

Version: 1.0 | Lifecycle: Rough Draft

Use only after required functional, technical, field-usability, and approval gates are complete.

Control: Version 1.0 | Status Rough Draft | Author and Chief Editor: Matt Ramsey | Co-Editor: Todd Shoeff | Final Approver: Jeremy Thamert

TBT-25.01: Control Panel Installation & Low Voltage

CSI Division: Div 25 | Track Assignment: Track 3 MEP & Interior

DIRECTIVE

Even low voltage systems (24V) pose a risk if shorted. Ensure power sources are isolated before terminating control wires.

GENERAL ORDER

Keep control panels clean and free of metal shavings. Use insulated tools when working near energized components.

Key Hazards & Mitigation (The 'What If')

- Wire stripped while live — isolate power, follow LOTO.
- Metal shaving falls onto circuit board — vacuum out, do not blow with compressed air.
- Working in tight electrical closet — ensure adequate lighting and clear exit path.

FIELD INSTRUCTION

Foreman: Verify all power sources to the control panel are locked out before termination begins.
