TBT-26.04: Underground Conduit & Duct Banks

CSI Division: Div 26 | Track Assignment: Track 1 Civil & Earthwork

DIRECTIVE

Trenching for duct banks requires utility locates prior to digging. Do not use PVC solvent cement in unventilated deep trenches.

GENERAL ORDER

Coordinate with operators when placing conduit in active excavations. Keep hands clear of pinch points when joining large PVC sections.

Key Hazards & Mitigation (The 'What If')

- Excavator hits unmarked line — stop digging, evacuate, call utility locator.
- Strong glue fumes in trench — ventilate trench, rotate workers.
- Worker caught between conduit and trench box — maintain situational awareness with operator.

FIELD INSTRUCTION

Foreman: Verify that all utility locates are fresh and marked before the excavator bucket drops.
