TBT-31.07: Soil Compaction & Roller Safety

CSI Division: Div 31 | Track Assignment: Track 1 Civil & Earthwork

DIRECTIVE

Vibratory rollers and trench compactors pose severe crush hazards. Workers must never position themselves between the compactor and a trench wall.

GENERAL ORDER

Operators must verify the backup alarm is functioning before use. Use remote-controlled compactors for deep trenches whenever possible.

Key Hazards & Mitigation (The 'What If')

- Roller operator loses sight of the grade checker — stop the machine immediately.
- Compacting near an unsupported trench edge — maintain a safe setback distance to prevent collapse.
- Remote control loses connection — stop work, retrieve the machine safely, replace batteries.

FIELD INSTRUCTION

Foreman: Verify the backup alarm on the roller is loud enough to be heard over site noise before compaction begins.

Toolbox Talk Documentation & Sign-Off

This Toolbox Talk (TBT) is a mandatory component of the MH Construction, INC Industrial Safety & Health (MISH) Program. All site personnel, including subcontractors and temporary laborers, must attend this briefing before commencing related work activities.

The Site Safety Commander or designated Foreman is responsible for delivering this content, ensuring comprehension, and documenting attendance. Failure to adhere to the safety protocols outlined herein may result in disciplinary action up to and including removal from the jobsite.

By signing the daily attendance log (Form MISH-F-10.1), you acknowledge that you have received, understood, and agree to comply with the safety directives presented in this Toolbox Talk.
