TBT-31.08: Contaminated Soil & Groundwater

CSI Division: Div 31 | Track Assignment: Track 1 Civil & Earthwork

DIRECTIVE

Excavation in brownfield or industrial sites may expose workers to contaminated soil or groundwater. Unidentified odors or soil discoloration must trigger an immediate work stoppage.

GENERAL ORDER

Do not handle suspect soil. If a sheen is visible on groundwater, stop dewatering operations and notify the Environmental Consultant.

Key Hazards & Mitigation (The 'What If')

- Excavator uncovers an unmarked buried drum — stop digging, clear the area, notify the Chief Superintendent.
- Strong chemical odor in the trench — evacuate the trench immediately, do not enter to investigate.
- Dewatering pump discharges oily water — shut off the pump, contain the discharge.

FIELD INSTRUCTION

Foreman: Halt all excavation and evacuate the area if any unknown odor, buried container, or soil discoloration is discovered.

Toolbox Talk Documentation & Sign-Off

This Toolbox Talk (TBT) is a mandatory component of the MH Construction, INC Industrial Safety & Health (MISH) Program. All site personnel, including subcontractors and temporary laborers, must attend this briefing before commencing related work activities.

The Site Safety Commander or designated Foreman is responsible for delivering this content, ensuring comprehension, and documenting attendance. Failure to adhere to the safety protocols outlined herein may result in disciplinary action up to and including removal from the jobsite.

By signing the daily attendance log (Form MISH-F-10.1), you acknowledge that you have received, understood, and agree to comply with the safety directives presented in this Toolbox Talk.
